A comprehensive analysis of the residential 🧪 real estate market in South Central Wisconsin.

JANUARY 2011

www.BunburyRealtors.com

Welcome to the Market Update, our monthly examination of South Central Wisconsin's residential real estate market. This report uses market-wide data based on transactions that closed in January of 2011 and compares them to closings that took place during the same months over the past three years. Closings typically occur eight to 12 weeks after a contract is signed; for that reason, the sales activity shown here reflects actual market conditions.

Home sales in Dane County are starting off 2011 on a positive note - exceeding the past two January sales reports, and matching that of 2008. For the eight county region serviced principally by the South Central Wisconsin Multiple Listing Service (SCWMLS), all counties but one met or exceeded last January's sales. This year will be very interesting one for the housing market as it marks the first year since 2008 that no governmental housing stimulus programs are expected.

The median sales price in Dane County was 4.8% ahead of last year for January, with a median price of \$203,912. It could be argued that the first time home buyers tax credit was skewing the 2008 market into lower price ranges. Another notable figure in January was the decrease in new listings - down 22.7% from last year - and the lowest monthly total since 2002. Total active listings in the county are also down - Approaching the inventory level of late 2005. Like Dane County, active inventories have fallen in all but Columbia and Green Counties, while lowa County has remained the same as one year ago.

For the entire SCWMLS, the most popular price ranges for sales in January were between \$100,000 and \$200,000 (38% of all sales) and \$200,000-\$300,000 (16% of all sales). It stands to reason that the most popular prices for active listings is the same: \$100,000-\$200,000 (39%) followed by \$200,000-\$300,000 (22%). For condominiums, 62% of all sales were under \$160,000 while 49% of active listings are \$160,000 and below.

The single family home sales for January of 2011 are the highest January totals since 2009, accounting for 179 of the 222 total reported. The 43 condominium sales trailed last year by 5, but were ahead of 2009. Each category also showed a significant drop in new listings for the month - down 21.5% for single family homes and down 25.9% for condominiums.

These figures support our predictions that 2011 will be a market that returns to normalcy. We have just wrapped up a positive holiday selling season, and job creation is predicted to continue. Interest rates are still low, but showing signs of a steady increase. All of these are signs of consumer confidence, hopefully giving buyers the courage to move forward while the tremendous home buying advantages are still available.

For the most up-to-date, comprehensive analysis of the South Central Wisconsin Real Estate market, visit our blog at www.BunburyRealtors-Blog.com. Our blog features daily posts with timely information for our buyers and sellers.

What is notable about these statistics is the January 2011 sales have matched or exceeded January 2008 sales, supporting the case that we are returning to a more normal housing market. This is also great news as 2009 and 2010 were stimulated by the outside first time home buyers credit, artificially boosting sales

More MLS statistics are available at www.scwmls.com.

For the entire SCWMLS, the most popular price ranges for sales in January were between \$100,000 and \$200,000 (38% of all sales) and \$200,000-\$300,000 (16% of all sales)

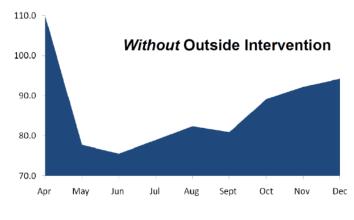

When looking at the graph above, keep in mind homes sales were artificially stimulated with the First Time Home Buyer's Tax Credit in 2009 and 2010, especially where we see the high spikes in sales.

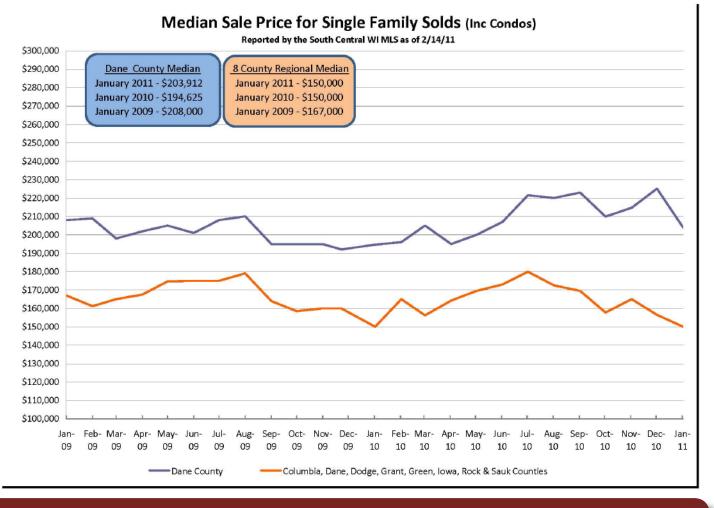

Overall, January 2011 was a continuation of the rise of pending home sales we have experienced nationally since the second quarter of 2010, without outside intervention of the First Time Home Buyers Tax Credit.

# **Pending Home Sales**

NAR 12/2010

The median sales price in Dane county was 4.8% ahead of last year for January when it could be argued that the then existing tax credit was skewing the market into lower price ranges. Overall, South Central Wisconsin properties have maintained their value over the past 2 years.

Waiting for a bargain? You may want to reconsider. When purchasing your home, there is a difference in price versus cost. The price of the home is influenced by market conditions however the cost is influenced by interest rates. As quoted in the Wall Street Journal "If prices come down another 10% but interest rates increase by one percentage point, that would mean the same monthly payment today versus waiting".

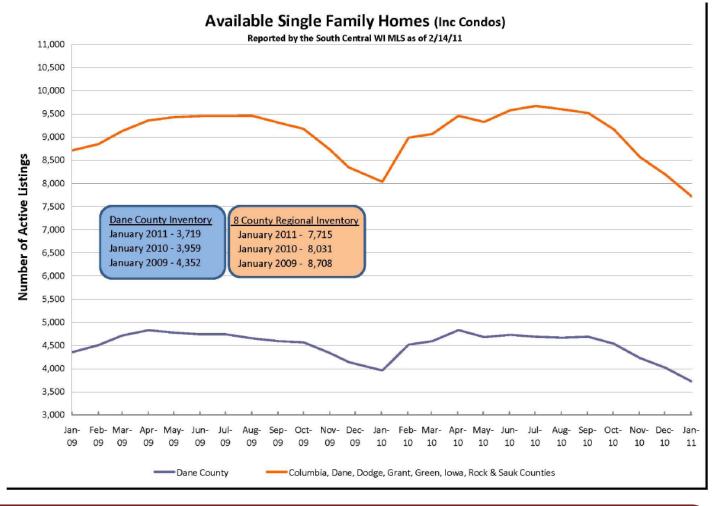

Take a look at the chart on the right. It doesn't matter when you purchased your home, if the price is the same the cost is impacted by your interest rate. Because of the difference in interest rates, it is actually more affordable to own the same house today than it was in 2004.

### Price is the same, it just costs less

Date	Loan Amount	Interest Rate	Monthly Payment (P&I)
2004	\$250,000	6.29	\$1,545.80
Today	\$250,000	5.00	\$1,342.05
Difference	\$203.75		

For January 2011, there was a significant drop in new listings for the month, down 21.5% for single family homes, and 25.9% for condominiums. This is good news for sellers, as less inventory implies less competition.

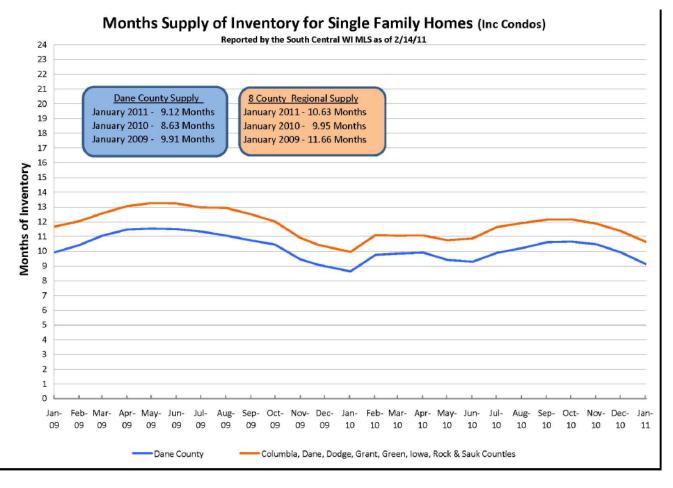

When you are looking to sell your home, you are ultimately concerned with getting your home sold for the most amount of money. However, in this economic climate, it is important to price your property competitively to get it sold. Here's why.

The graph above indicates for the 222 persons who bought a home in January of 2011, had their pick from 3,719 homes. That is a lot of inventory to choose from, creating a low demand for properties. Since demand is low, we are in now in a buyers market. Buyers can shop around for the best deal simply because there is so much inventory.

As a home seller you must make sure your home is priced right to appeal to buyers. There is a large gap between homes sold and inventory, and the difference comes down to competitive pricing.

Months Supply = current inventory divided by the average sales for the most current 12 months

What is month's supply of inventory and why is it important?

The amount of months supply of inventory a market has available, directly impacts price.

In 2000-2006, it was a sellers market. There was more of a demand for housing then there were properties. Inventory was only on the market for I-4 months, allowing home prices to appreciate. This drives the consumer to pay more, and the highest bidder wins.

Fast forward to last year, 2010. We experienced the complete opposite of the 2000-2006 real estate market. Since demand is low, we are in now in a buyers market. Buyers can shop around for the best deal simply because there is so much inventory.
